

## FOSS – We deliver dedicated analytical solutions

FOSS is the world's leading provider of analytical instruments for the food, agricultural, chemical and pharmaceutical industry. It is estimated that 85% of the world's grain production and 80% of dairy production is tested on a FOSS instrument.

### **Improving profit, product quality and food safety**

The benefits of using FOSS solutions are many. Effective analysis leads to substantial savings in production. Consistent quality helps to build brand reputations in a dynamic global marketplace. Speed and convenience of analysis helps to ensure food safety, for example, by helping to get products on the supermarket shelves earlier and with confidence.

### **Dedicated analytical solutions**

A principle behind the success of FOSS analytical solutions is their suitability for analysis task in hand, covering aspects such as usability, calibration and low running costs. Thus, a FOSS product is not just an instrument, but a 'dedicated analytical solution' that saves time and improves control.

### **Rational use of valuable resources**

A cornerstone of the FOSS vision is: To contribute to the rational use of our planet's natural resources and thus to the nutrition and health of the world.

### **FOSS in the world**

- FOSS was founded in 1956 by Nils Foss.
- The company employs 1100 people worldwide.
